DETAILED ACTION

Claims 1-11 are pending in the case. Receipt of Information Disclosure Statements on 6/10/02 and 2/14/03, Appointment of Attorney form on 1/11/02, Declaration on 1/10/02, and Drawings on 1/8/02 is acknowledged.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5 and 11 drawn to a method of preparing a vector, classified in class 435, subclass 91.52.
- II. Claims 6 and 7, drawn to a hybrid molecule, classified in class 435, subclass 320.1 and class 536, subclass 24.1, 24.2, 23.1, 23.2, 23.4, 23.5, 23.6, 23.7.
- III. Claim 8-10, drawn to a method of providing biotechnology reagents, classified in class 435, subclass 91.52 and class 705, subclass 26.

The inventions are independent and distinct, each from the other because of the following reasons:

Inventions of Group II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used as probes in DNA hybridization studies.

Inventions of Group I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by DNA synthesis techniques.

Inventions of Groups I and III are biologically and functionally different and distinct from each other and thus one does not render the other obvious. The methods of Groups III comprise steps which are not required for or present in the methods of the other groups: providing at least two isolated nucleic acid molecules, and one isolated nucleic acid molecules containing insert sequence, and admixing the nucleic acid molecules (Group I), and providing a menu of vector fragments, receiving a request for at least one vector fragment, and providing the requested vector fragment to user (Group III). The end result of the methods are different: the production of a vector (Group I), and the provision of a biotechnology reagent to a user (Group III). Thus, the operation, function and effects of these different methods are different and distinct from each other. Therefore, the inventions of these different, distinct groups are capable of supporting separate patents.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Furthermore, especially in instances where the classifications are the same, the non-patent literature searches required for

each of these inventions are not co-extensive, hence said searches would be burdensome. Therefore, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
